

# SOCET GXP® for the GEOINT analyst 1-day training course

## Course content

The SOCET GXP for the GEOINT analyst course offers instruction and hands-on training for SOCET GXP's core toolset. Learn about the basic SOCET GXP operating environment, typical workflows, terminology, and the fundamental concepts required to create accurate, image and map products quickly using geospatially registered data.

Upon successful completion of the this course, students will become familiar with the software interface and menus, recognize frequently used tools, and master the basic navigation required to build finished products — complete with graphics, annotations, targets, shapefiles, and other relevant data. Other skills acquired include change detection, image comparison, and generating user-defined templates.

### Topics include:

- Workspace Manager overview
- Visual Coverage Tool (VCT)
- Image manipulation
- Multiports
- Registration
- Image comparison
- Graphics Manager
- Templates
- Finishing Tool
- Customizing SOCET GXP

### Please note:

If you plan on attending the *SOCET GXP for the eXtreme Analyst* training course, there is no need to register for *SOCET GXP for the GEOINT analyst*. The first day of the 3-day *SOCET GXP for the eXtreme Analyst* training course covers the same information as *SOCET GXP for the GEOINT analyst*.
